- CDR: Clinical Dementia Rating
- DSM-5: Diagnostic and Statistical Manual of Mental Disorders-5<sup>th</sup> version

# Neuroinflammation: as a target of regenerative medication for MCI

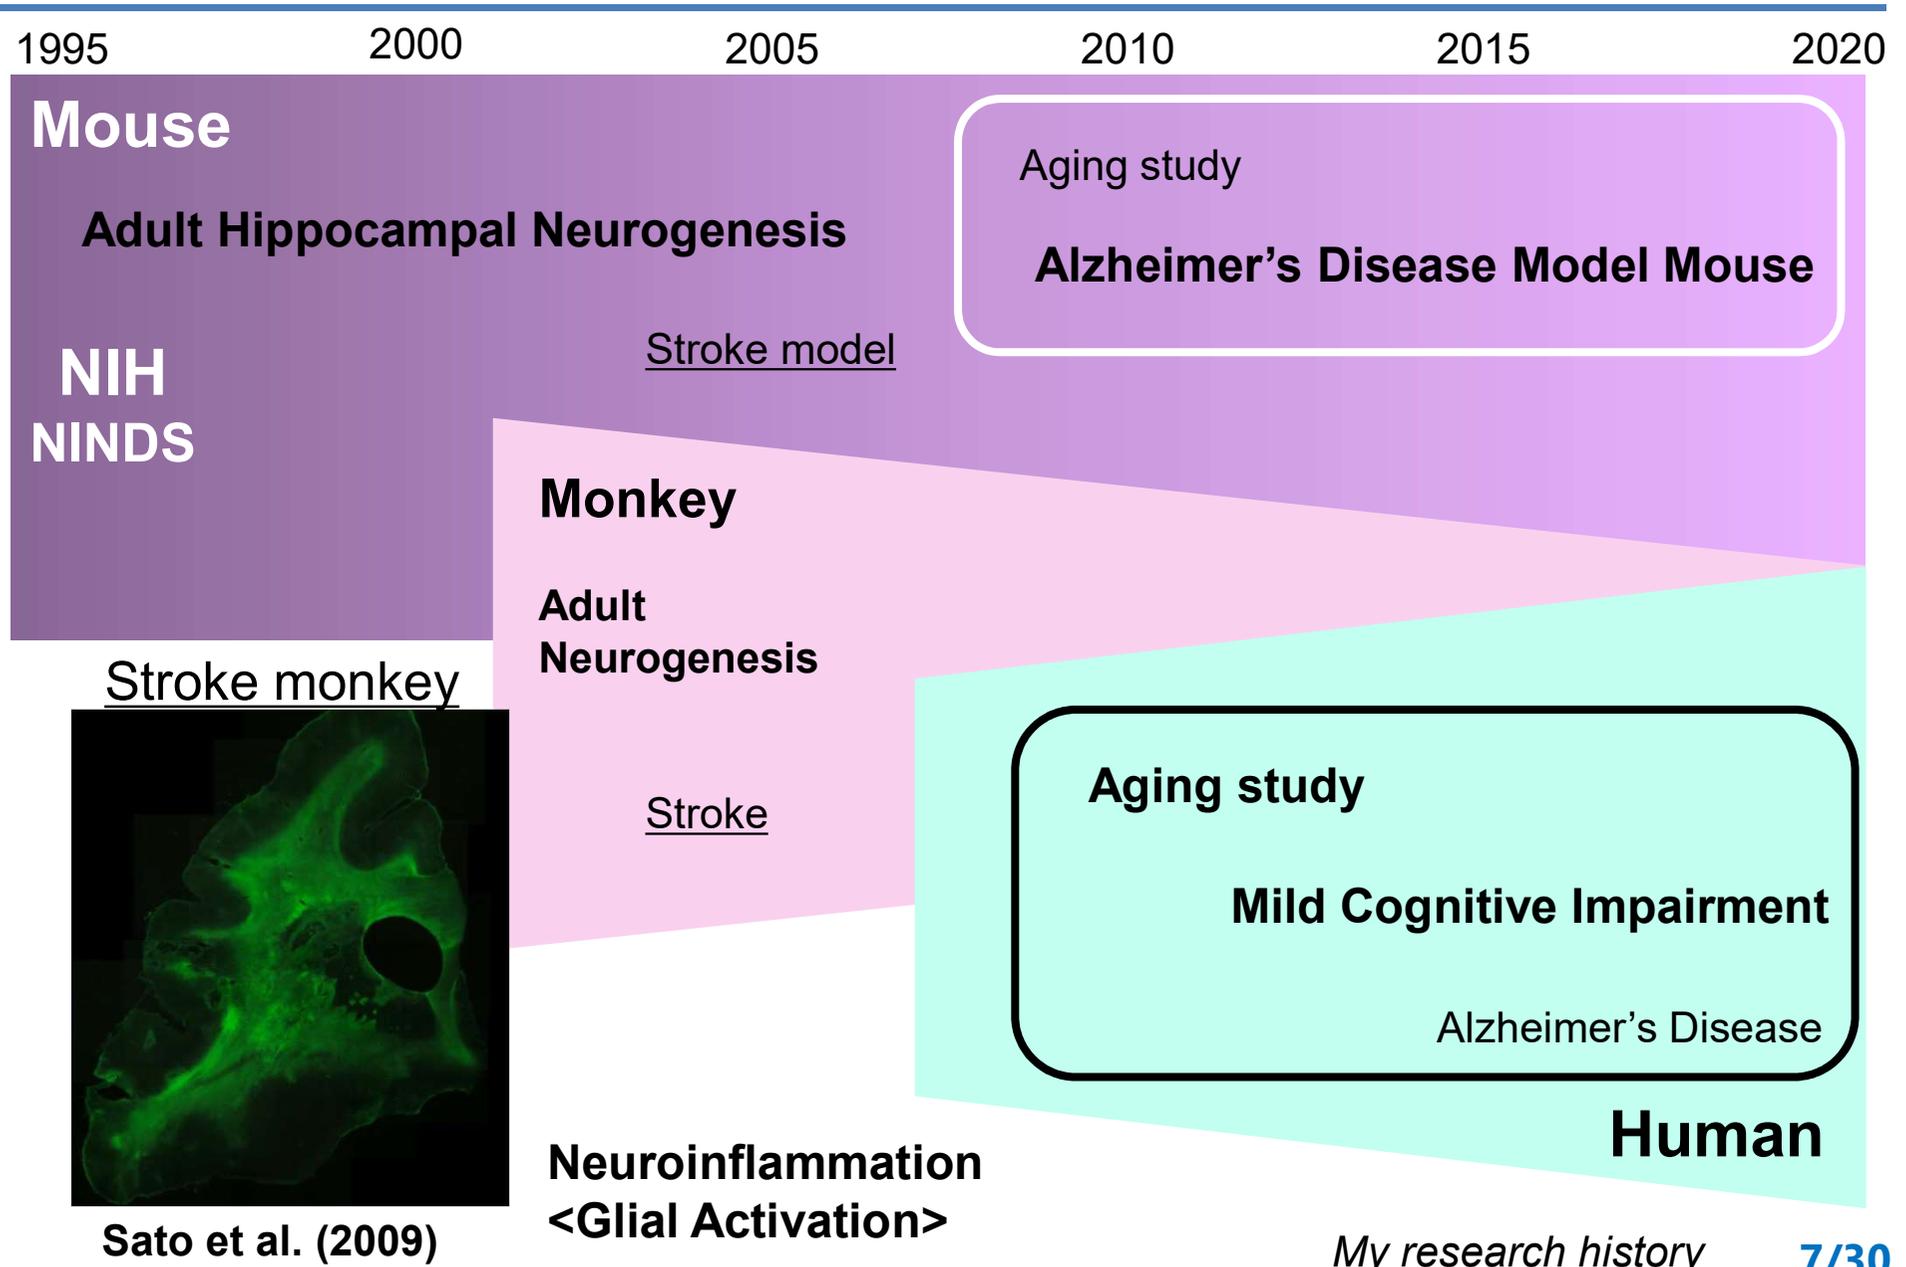

# Strategies to control neuroinflammation

---

## Many trials with:

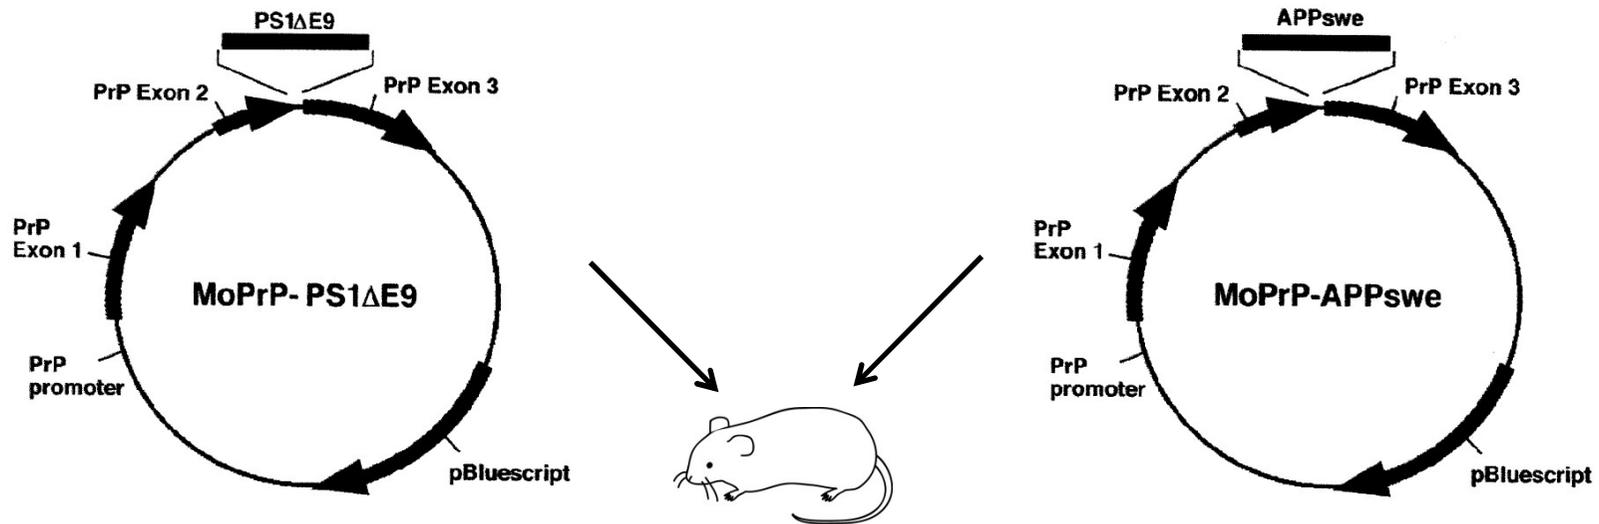

- **Nonsteroidal Anti-Inflammatory Drugs (NSAIDs)**  
NSAIDs, such as ibuprofen and indomethacin  
COX-2 inhibitors, such as rofecoxib and celecoxib
- **To control inflammatory cytokines**  
Antagonists, Specific blockers  
Antibodies toward inflammatory cytokines
- **Anti-inflammatory small molecules**
  - Anti-inflammatory drugs, such as ChE inhibitors
  - Anti-inflammatory natural products

# Age-related declines in Cognitive Functions in Animal and Human

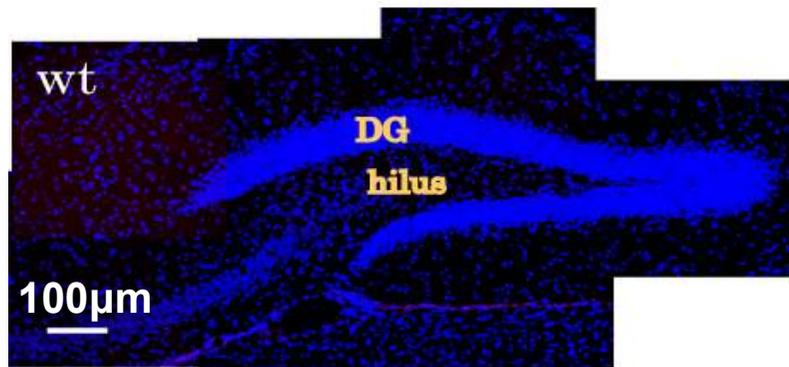

# Alzheimer's Disease (AD) Model Mouse

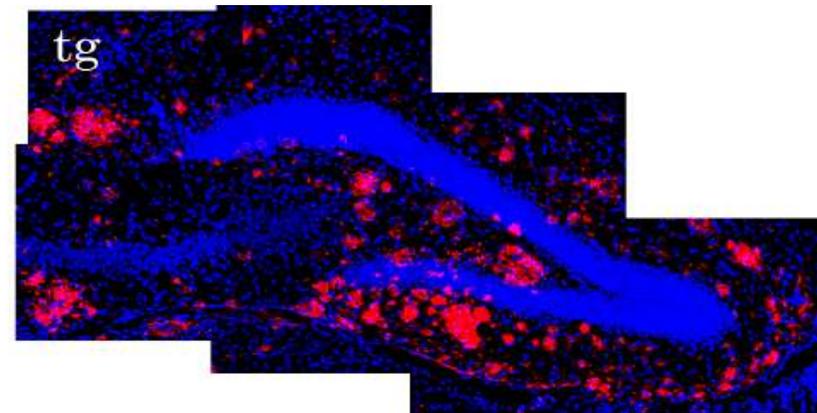

【B6C3-Tg(APP<sup>swe</sup>,PSEN1<sup>dE9</sup>)85Dbo/J】

Wild Type

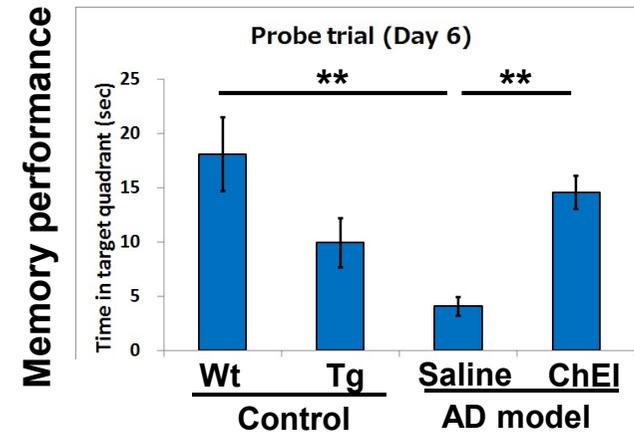

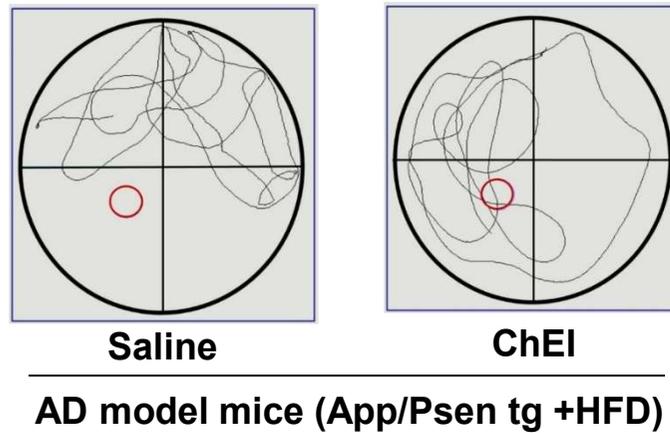

AD Transgenic

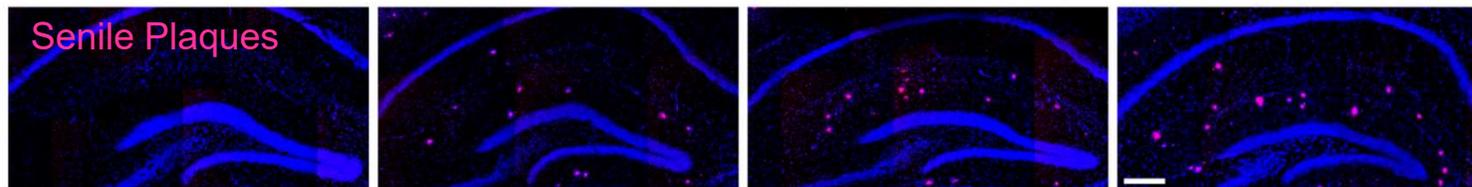

Senile Plaques (18 month olds: Red, Anti-A $\beta$  staining)

# Control of memory decline and neuroinflammation by Choline-esterase inhibitor (ChEI)

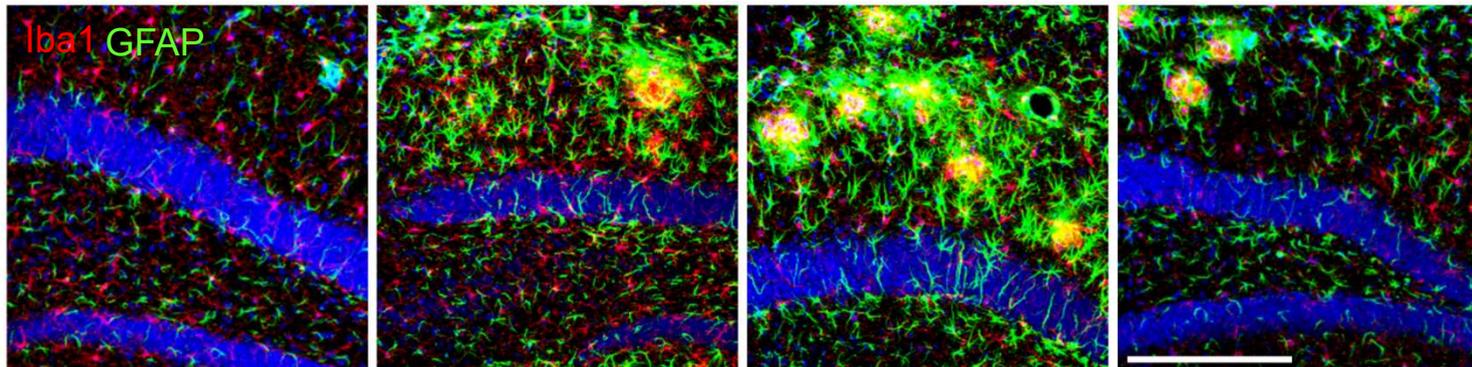

## Water Maze (Probe test)

ChEI has:  
no effect on  
plaque formation

suppressive effect  
on  
neuroinflammation

Wild type

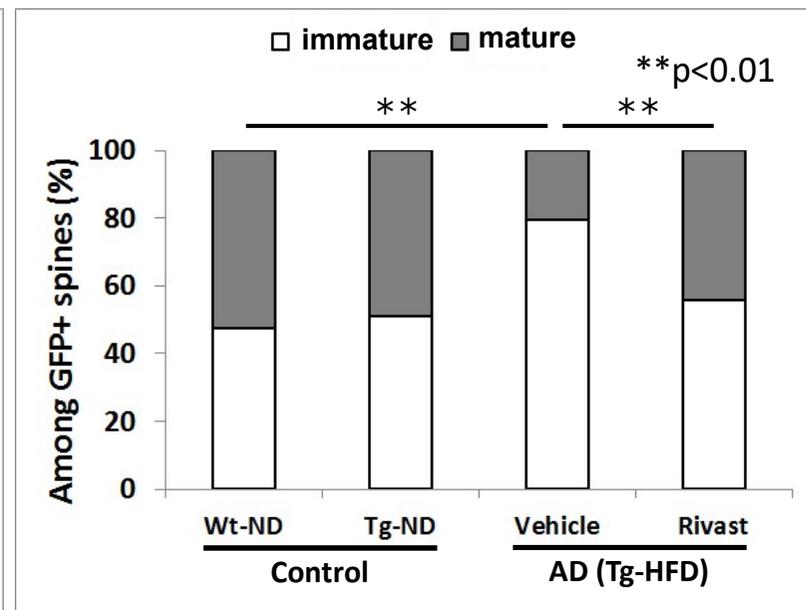

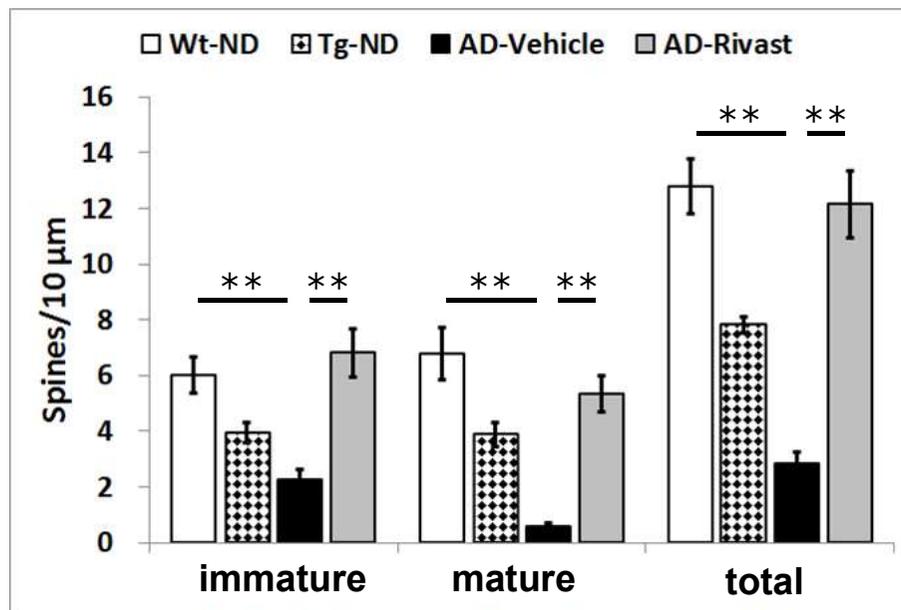

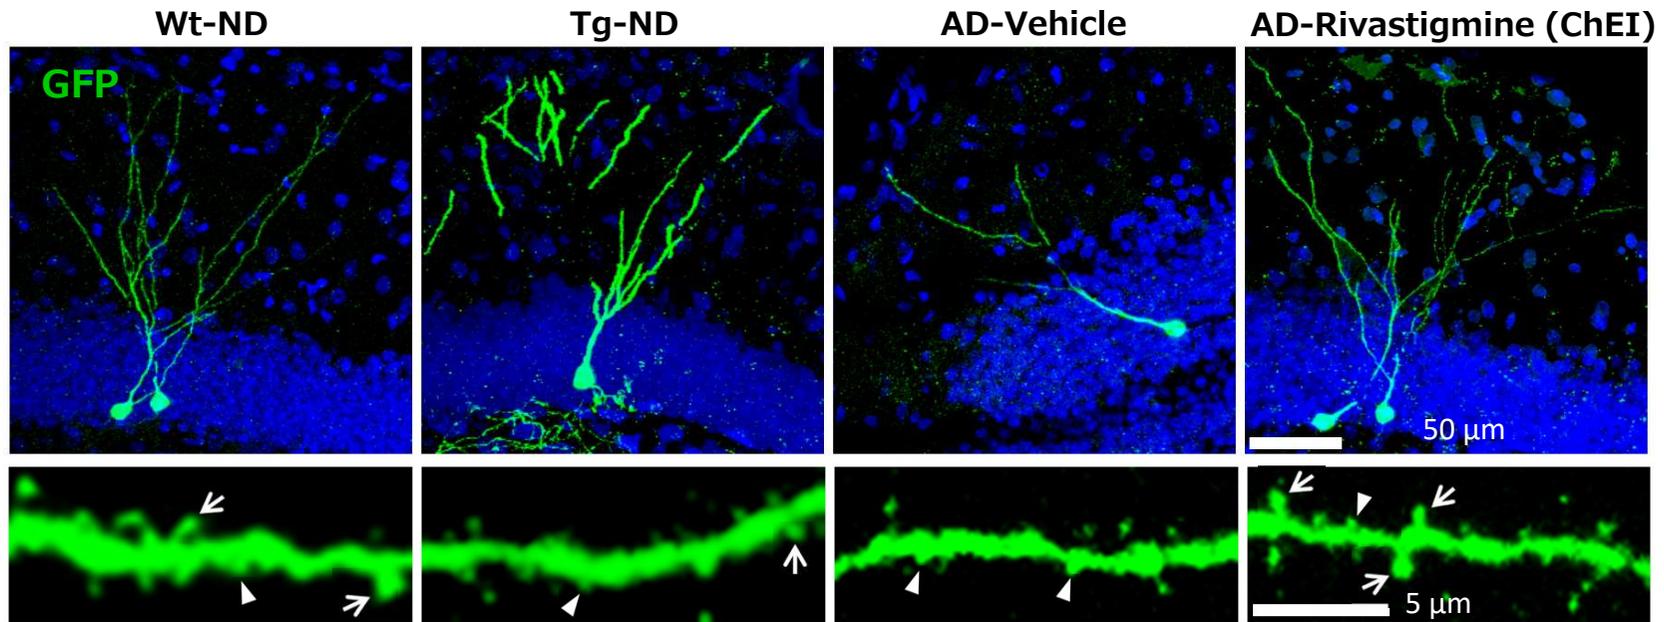

App/Psen tg

Saline

ChEI

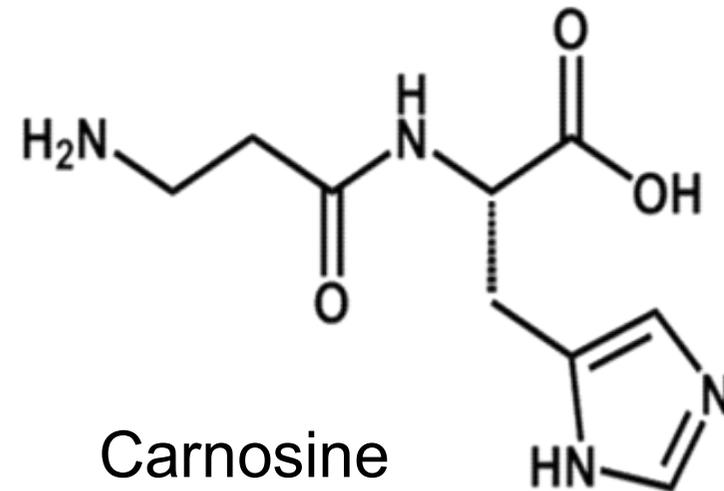

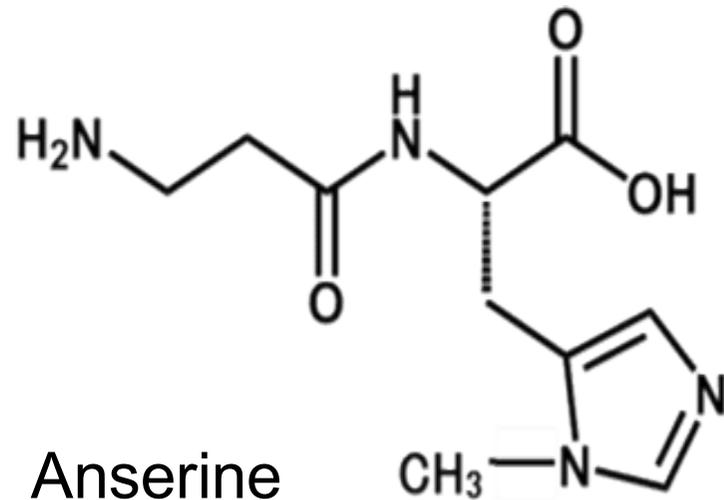

AD model mice (App/Psen tg +HFD)

# ChEI Recovers Adult Neurogenesis in AD model mouse

# Imidazole-di-peptides

Anti-inflammatory natural products from vertebrate muscle

**Chicken (100g):**  
**Anserine (0.6g)**  
**Carnosine (0.2g)**

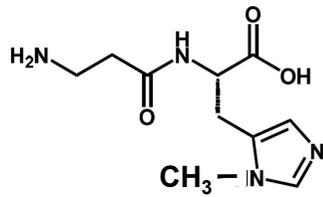

**Salmon (100g):**  
**Anserine (0.5g)**

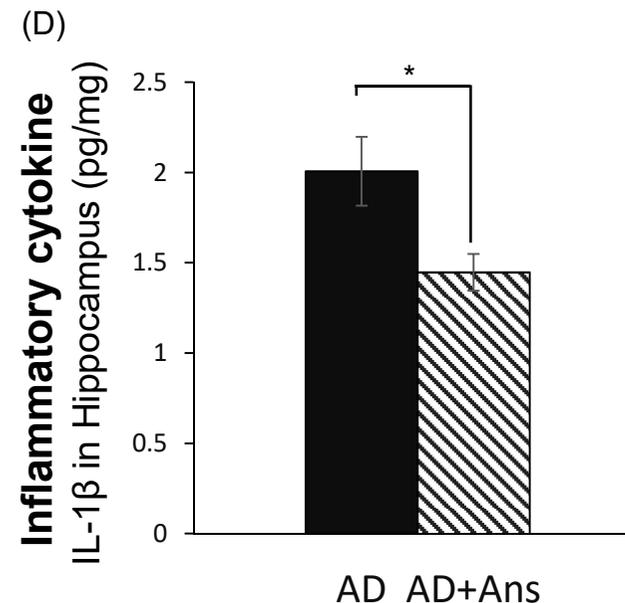

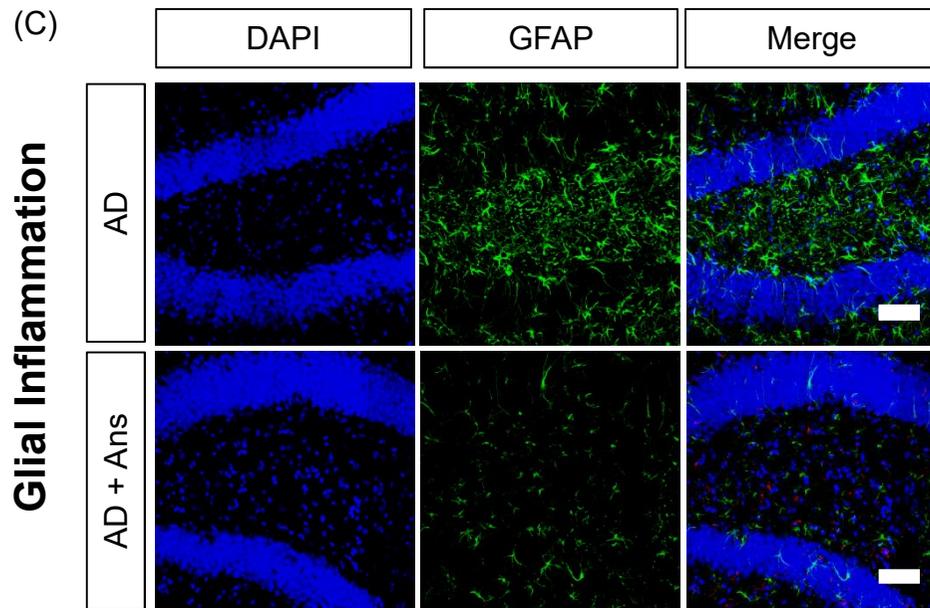

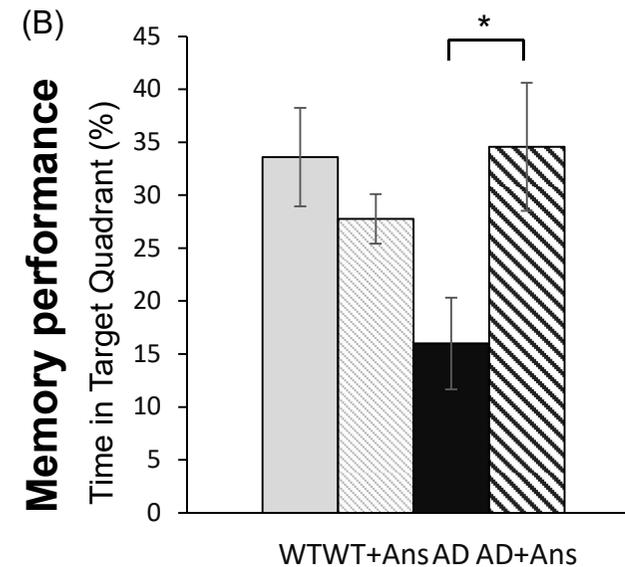

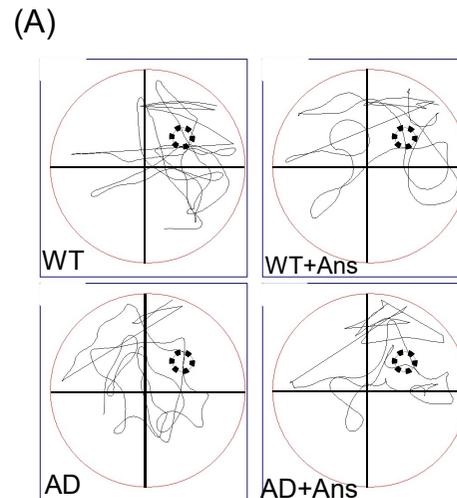

# Anserine protects neuroinflammation and memory decline in 18 months old AD model mouse

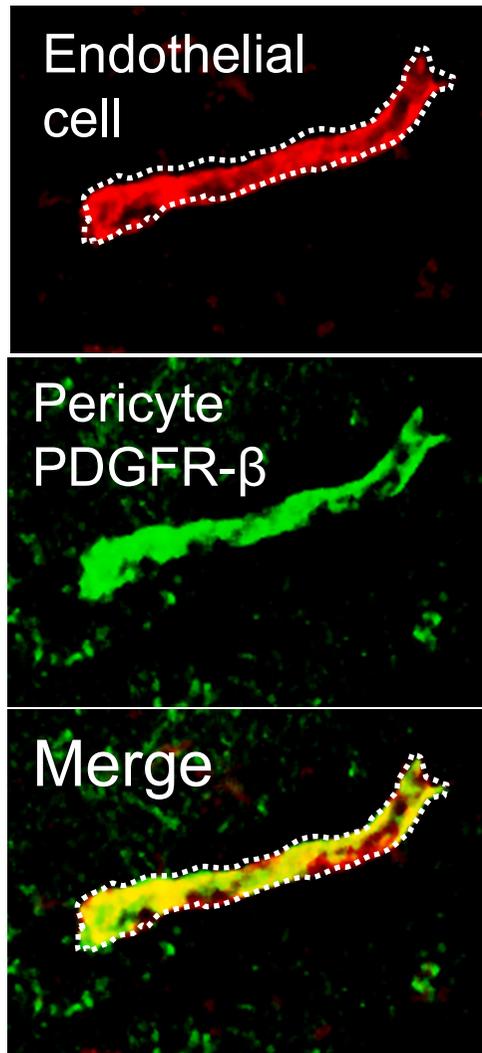

**Imidazoledipeptide  
Anserine (Ans)  
( $\beta$ -alanyl-methyl histidine)**

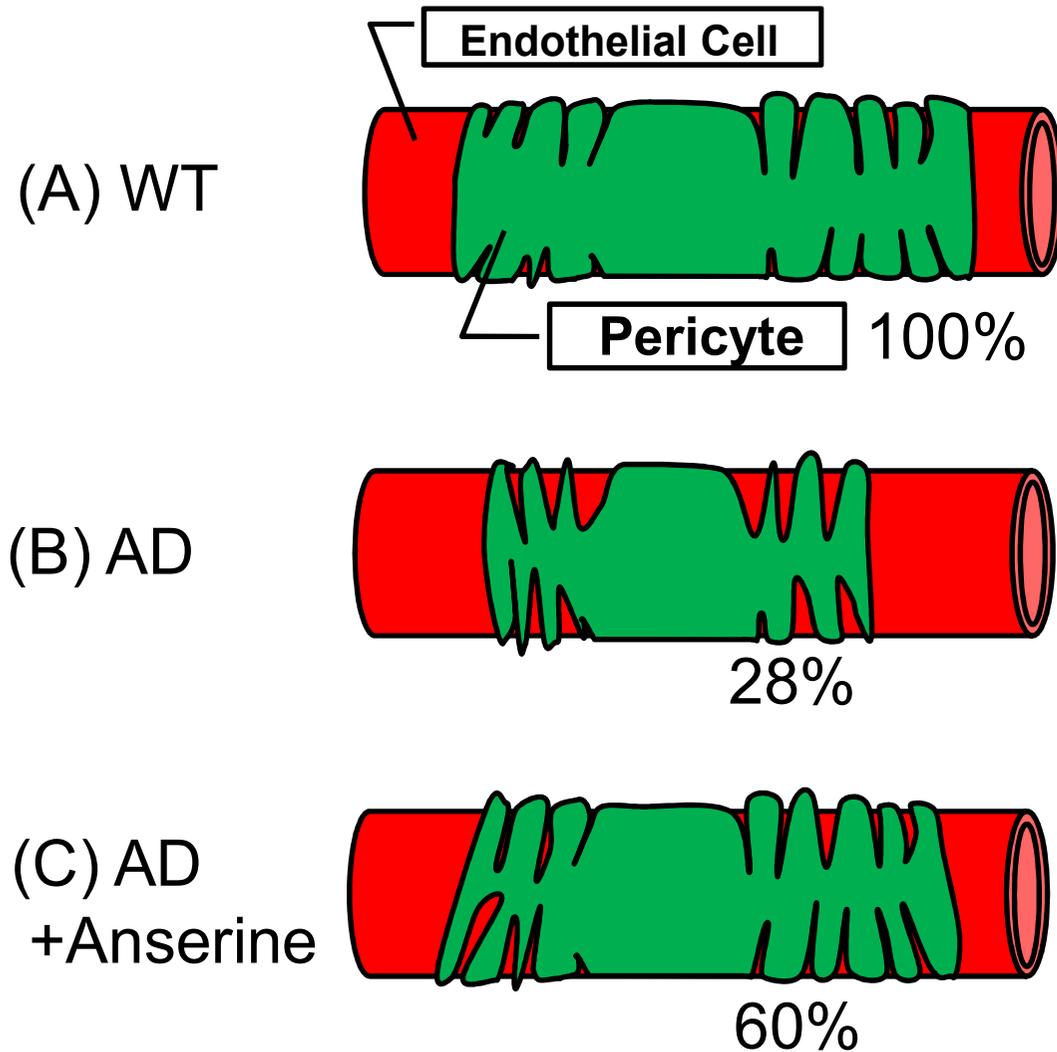

**Purification  
(>93 %) from Salmon**

# Anserine recovers degeneration of brain capillary pericytes

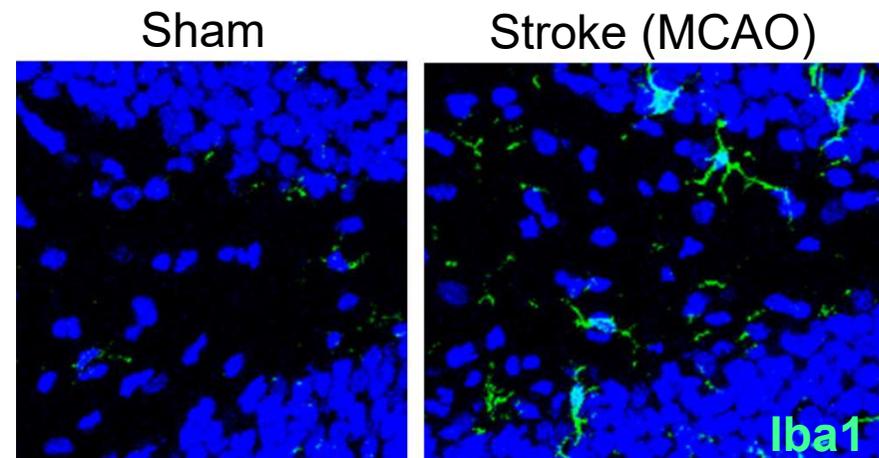

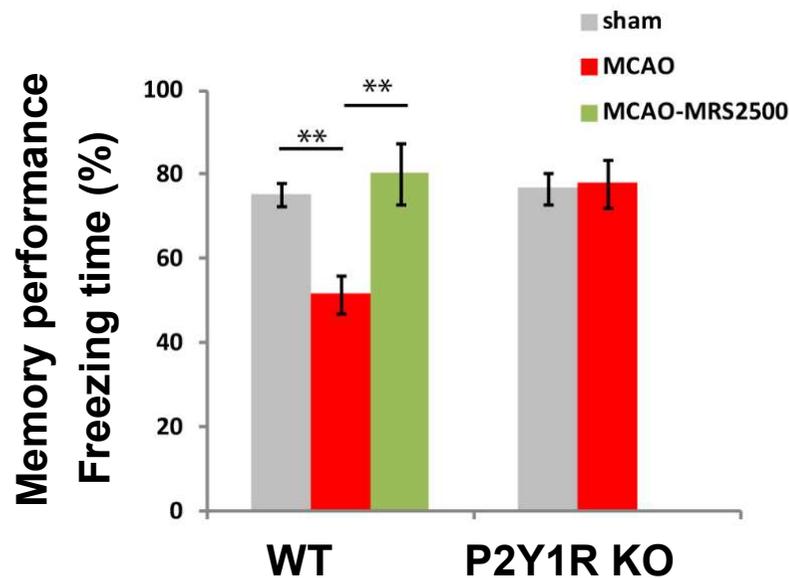

Pericyte staining with anti-PDGFR- $\beta$

# Aging and Anti-Aging of Cognitive Functions in Mouse

- 1) Alzheimer's Disease model mouse showed declines in cognitive function and glial neuroinflammation.
- 2) The control of neuroinflammation in AD model mouse led to the improvement of cognitive functions.
- 3) Cognitive declines in Stroke model mouse were also prevented in (less glial neuroinflammation) P2Y1R knock-out mouse.

 0.75g/0.25g per day

<b>CLINICAL DEMENTIA RATING (CDR):</b>	<b>0</b>	<b>0.5</b>	<b>1</b>	<b>2</b>	<b>3</b>
--	----------	------------	----------	----------	----------

	Impairment				
	<b>None 0</b>	<b>Questionable 0.5</b>	<b>Mild 1</b>	<b>Moderate 2</b>	<b>Severe 3</b>
<b>Memory</b>	No memory loss or Slight inconsistent forgetfulness	Consistent slight forgetfulness; Partial recollection of events; "benign" forgetfulness	Moderate memory loss; more marked for recent events; defect interferes with everyday activities	Severe memory loss; Only highly learned material retained; new material rapidly lost	Severe memory loss; only fragments remain

<b>Orientation</b>	<p><b>Memory Questions for Informant (Excerpt):</b> <span style="float: right;"><b>70's Male (ApoE4/E3) BL, FU</b></span></p> <p>1. Does he/she have a problem with his/her memory or thinking? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No</p>				
<b>Judgment &amp; Problem Solving</b>	<p>1a. If yes, is this a consistent problem (as opposed to inconsistent)? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No</p> <p>2. Can he/she recall recent events? <input checked="" type="checkbox"/> Usually <input type="checkbox"/> Sometimes <input type="checkbox"/> Rarely</p>				
<b>Community Affairs</b>	<p>3. Can he/she remember a short list of items (shopping)? <input checked="" type="checkbox"/> Usually <input type="checkbox"/> Sometimes <input type="checkbox"/> Rarely</p> <p>4. Has there been some decline in memory during the past year? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No</p>				
<b>Home and Hobbies</b>	<p>5. Is his/her memory impaired to such a degree that it would have interfered with his/her activities of daily life a few years ago (or pre-retirement activities)? (collateral sources opinion) <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No</p>				
<b>Personal Care</b>	<p>6. Does he/she completely forget a major event (e.g., trip, party, family wedding) within a few weeks of the event? <input type="checkbox"/> Usually <input checked="" type="checkbox"/> Sometimes <input checked="" type="checkbox"/> Rarely</p> <p>7. Does he/she forget pertinent details of the major event? <input checked="" type="checkbox"/> Usually <input checked="" type="checkbox"/> Sometimes <input type="checkbox"/> Rarely</p> <p>8. Does he/she completely forget important information of the distant past (e.g., birthdate, wedding date, place of employment)? <input type="checkbox"/> Usually <input type="checkbox"/> Sometimes <input checked="" type="checkbox"/> Rarely</p>				

# Reports regarding reversion from MCI

## Effect of reversion from mild cognitive impairment (MCI) on cumulative incidence of dementia

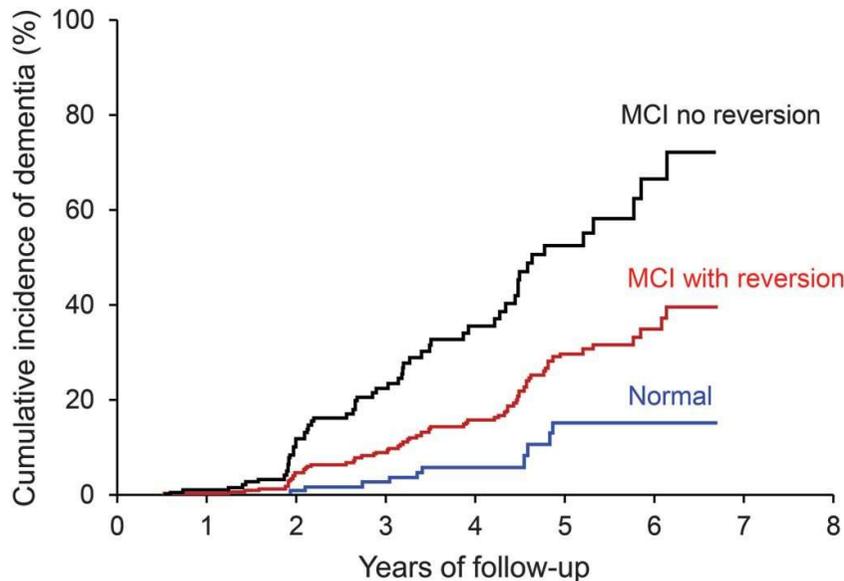

Figure 2 Cumulative incidence of dementia in subjects who developed MCI and did not revert to CN, subjects who developed MCI and reverted to CN, and subjects who were CN at baseline

Roberts et al. *Neurology* (2014)

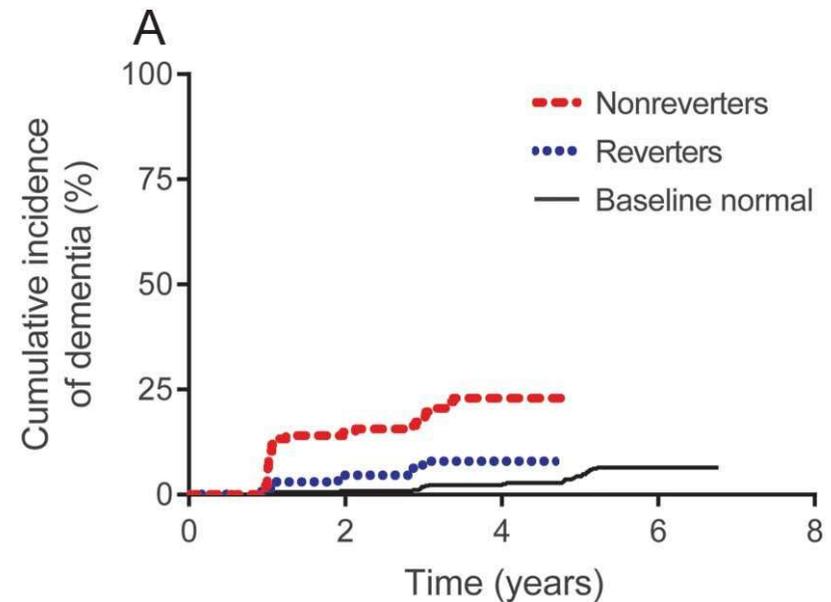

Figure 2 Effect of reversion from mild cognitive impairment (MCI) on cumulative incidence of dementia

Aerts et al. *Neurology* (2017)

## Summary (Human Clinical Studies)

---

- 1) **Regenerative Medicine** to reduce the risk of Dementia can be feasible in Individuals with Mild Cognitive Impairment (MCI). MCI is a reversible transition stage between cognitive normal (CN) and Alzheimer's Disease (AD). Reversion, from MCI to CN, reduces the risk of the onset of AD, to about 50%.
- 2) **Neuroinflammation** as a downstream cellular responses is a target to develop regenerative medicine for Dementia.
- 3) **Anserine/Carnosine**, natural products from animal meat (imidazoledipeptides), suppressed neuroinflammation-related neurovascular dysfunction and cognitive declines in elders.
- 4) **In MCI Individuals carrying ApoE4, a major AD risk gene**, Anserine/Carnosine supplementation induced reversion and may reduce the risk of AD onset. Large scale clinical study to verify its effect is definitely awaited.
